nahwiki dump progress on 20260901

This is the Wikimedia dump service. Please read the copyrights information. See Meta:Data dumps for documentation on the provided data formats.

Older versions of the 7zip decoder on Windows are known to have problems with some bz2-format files for larger wikis; we recommend the use of bzip2 for Windows for these cases. 7zip 20.00 alpha (x64) on Win10 LTSC 2019 and later versions should work properly.

Please report problems with these dumps on Phabricator and add the Dumps-generation tag.

See all databases list.
